-- =====
-- Author:          <jason gruenwald>
-- Create date:    <10/10/08>
-- Description:    < Add Hero Photo To Data Table. The original informaiton for
-- this photo during the creation of the park item is NULL. The photo wasn't
-- uploaded with the account creation for it. It was later uploaded/saved to
-- a folder and the URL is being sent in to the Stored Procedure from the
-- page code. After recording the URL it is being returned as an output
-- parameter to display the photo after the upload. This is to confirm that
-- the photo and URL were saved correctly in order. If the procedure doesn't
-- return a valid URL for the photo in the case of photo cannot be found, the
-- web application will show an error message indicating that saving the
-- photo was unsuccessful. It is also used for UPDATES to this photo as
-- well. >
